

FL-03 – What Are You Proving?

FlyRank AI Internship – AI Fluency (Week 1)

Assignment Code: FL-03

Intern: Ghanna Zubair

Track: Machine Learning + AI Fluency

Date: July 2026

Proof Statement

My primary claim is that I can design and build practical AI and Machine Learning solutions that solve real-world problems using Python, data analysis, and modern AI tools. I focus on creating projects that are understandable, reproducible, and useful rather than simply training models for high accuracy. My intended audience is hiring managers, technical recruiters, internship mentors, and software engineering teams looking for an entry-level Machine Learning or AI Developer. Through my portfolio, GitHub repositories, and documented internship work, I want to demonstrate my technical skills, problem-solving ability, and continuous learning. The single action I want visitors to take is to review my projects and invite me for an internship or entry-level Machine Learning or AI role.

Why This Portfolio Needs to Exist

A CV and LinkedIn profile can list my skills and certificates, but they cannot fully demonstrate how I solve problems, document my work, or apply Machine Learning to practical datasets. This portfolio provides concrete evidence of my abilities through real projects, notebooks, reports, and research completed during the FlyRank AI Internship.

Supporting Evidence

During this internship I am building evidence through:

- Machine Learning notebooks
- AI workflow documentation
- Research reports
- GitHub portfolio
- Data analysis projects

- Capstone project
 - Professional documentation
 - Continuous weekly assignments
-

Target Audience

This portfolio is designed for:

- Machine Learning Recruiters
 - AI Hiring Managers
 - Internship Mentors
 - Technical Interviewers
 - Software Engineering Teams
-

Primary Goal

Demonstrate practical Machine Learning and AI development skills through real-world projects and documented evidence that leads to internship or full-time opportunities.

Current Focus

- FlyRank AI Internship
- Machine Learning
- Python Development
- Data Analysis
- AI Workflow Design
- Building a Professional Portfolio
- Capstone Research Project
